SUMMARY

AI/ML and Cloud Engineering enthusiast with experience building **Machine Learning Solutions**, **Data Pipelines**, **ETL Workflows**, **Semantic Search Systems**, and **Scalable Backend Applications** using **Python**, **SQL**, **FastAPI**, **PostgreSQL**, **MongoDB**, and **Cloud Technologies**. Hands-on experience in **Machine Learning**, **Data Science**, **Embeddings**, **Recommendation Systems**, **Information Retrieval**, and **Cloud-Native Development**. Strong foundation in **Data Structures**, **Algorithms**, **Software Design**, and **Data Analytics**, with interest in **Google Cloud Platform (GCP)**, **Big Data Processing**, **Distributed Systems**, and **Production-Scale AI Solutions**.

EDUCATION

Gujarat Technological University — May 2022 – May 2026
Bachelor of Engineering in Computer Engineering — India

EXPERIENCE

Maven Profcon Services — Dec. 2025 – Apr. 2026
AI/ML Intern — Ahmedabad, India

* Built data processing pipelines to transform unstructured resume data into structured datasets for machine learning and analytics applications.
* Analyzed large-scale candidate datasets using Python workflows to support evaluation, ranking, and data-driven hiring decisions.
* Developed candidate matching frameworks using semantic analysis, feature engineering, and scoring techniques to improve job-candidate alignment.
* Collaborated with stakeholders to deliver scalable analytical solutions through data preprocessing, feature extraction, and reporting workflows.

Grid Controller of India Limited (POSOCO) — Jul. 2025 – Aug. 2025
Data Analytics & Engineering Intern — Bangalore, India

* Designed and automated ETL pipelines using Python and SQL to process large-scale power system datasets for analytics and operational monitoring.
* Performed data cleaning, transformation, feature engineering, and exploratory analysis on high-volume time-series data to identify operational trends and improve data quality.
* Optimized SQL queries and data models, improving scalability, reliability, and processing efficiency for analytical workloads.
* Developed anomaly detection analyses and reporting solutions, delivering actionable insights for system monitoring and data-driven decision-making.

PROJECTS

Cloud-Native Intelligent Analytics Platform
Google Cloud Platform,BigQuery,Vertex AI,FastAPI,Python

* Built a cloud-native analytics platform on Google Cloud to ingest, process, and analyze large-scale business datasets.
* Developed ETL pipelines using Python and BigQuery to transform and store structured data for analytical workloads.
* Integrated Vertex AI models for anomaly detection, forecasting, and automated insight generation.
* Exposed analytics services through FastAPI APIs and created interactive dashboards to support data-driven decision-making.

Serverless Resume Processing Pipeline
AWS S3, AWS Lambda, Python, FastAPI, MongoDB

* Built a serverless resume processing pipeline using **AWS S3** and **AWS Lambda** for automated document ingestion and processing.
* Developed ETL workflows to extract, clean, and transform resume data for downstream analytics and intelligent search systems.
* Integrated **FastAPI** services with **MongoDB** for scalable backend data storage and retrieval workflows.
* Implemented embedding-based semantic search and candidate ranking pipelines for intelligent resume matching and retrieval.

RAG-Based Document Intelligence System
Python,LLMs,FAISS,FastAPI,LangChain

* Built a Retrieval-Augmented Generation (RAG) system for semantic search and question answering over large collections of unstructured documents.
* Implemented document chunking, embedding generation, and vector similarity search using FAISS to enable efficient information retrieval.
* Developed scalable FastAPI services for real-time document querying, retrieval, and AI-powered response generation.

Predictive Maintenance System
Python,Scikit-learn,Time-Series Analysis,FastAPI

* Built a machine learning-based predictive maintenance system to analyze large-scale time-series sensor data and identify equipment anomalies.
* Developed data processing and ML pipelines for preprocessing, feature engineering, and anomaly detection on operational datasets.
* Generated predictive insights to support preventive maintenance strategies, improve system reliability, and reduce operational downtime.
* Designed FastAPI-based inference services for automated monitoring and real-time anomaly detection workflows.

SKILLS

Programming: Python, SQL, Pandas, NumPy, Scikit-learn
Computer Science Fundamentals: Data Structures, Algorithms, Object-Oriented Programming, Software Design
Machine Learning / AI: Machine Learning, NLP, LLMs, RAG, Semantic Search, Classification, Regression, Clustering, Anomaly Detection, Recommendation Systems
Cloud / Data Engineering: Google Cloud Platform (BigQuery, Vertex AI), AWS S3, AWS Lambda, ETL Pipelines, Data Warehousing, FastAPI, REST APIs
Databases: PostgreSQL, MongoDB, MySQL, FAISS
Data Analytics: EDA, Feature Engineering, Time-Series Analysis, Statistical Analysis, Data Visualization
Tools: Git, Docker, Linux, Streamlit, Power BI, Tableau
